

MEDICATION TRAYS

CASE SPECIFIC

At the beginning of each case, please lay out the case specific medication trays, along with the code tray. During orientation of the day the team of participants should be informed on how to use the medications and what is expected of them.

In each tray, the fake medications are dyed blue (food coloring used) for safety and are placed in specific locations based on the organizational chart. There is also always a “Drug X” in every tray, just for those moments when a medication is requested that is not in your pre-made tray.

Please use this chart to organize your trays, they can be modified to fit your site’s needs.

FOREIGN BODY	SEPSIS	SEIZURE	DROWNING
Albuterol Combi/Duo neb Decadron NS bullets Methylprednisolone Magnesium Sulfate Zofran Racemic Epinephrine Drug X	Cefotaxime Ceftriaxone Dopamine Gentamycin Norepinephrine Vasopressin Vancomycin Ampicillin Drug X	50% Dextrose Insulin Ativan Valium Keppra Phenobarbital Versed Dilantin Diastat Zofran Narcan Drug X	Epinephrine 1:1,000 Epinephrine 1:10,000 Atropine Calcium Chlorine 2% Lidocaine 8.4% Sodium Bicarb Adenosine Versed Valium Ativan Morphine Sulfate Rocuronium Vecuronium Ketamine Amiodorone Succinylcholine Etomidate Propofol
